- (5) Except for recorders powered solely by the engine-driven electrical generator system, there is an automatic means to simultaneously stop a recorder that has a data erasure feature and prevent each erasure feature from functioning, within 10 minutes after crash impact; and
- (b) Each nonejectable record container must be located and mounted so as to minimize the probability of container rupture resulting from crash impact and subsequent damage to the record from fire. In meeting this requirement the record container must be located as far aft as practicable, but need not be aft of the pressurized compartment, and may not be where aftmounted engines may crush the container upon impact.
- (c) A correlation must be established between the flight recorder readings of airspeed, altitude, and heading and the corresponding readings (taking into account correction factors) of the first pilot's instruments. The correlation must cover the airspeed range over which the airplane is to be operated, the range of altitude to which the airplane is limited, and 360 degrees of heading. Correlation may be established on the ground as appropriate.
 - (d) Each recorder container must:
- (1) Be either bright orange or bright yellow;
- (2) Have reflective tape affixed to its external surface to facilitate its location under water; and
- (3) Have an underwater locating device, when required by the operating rules of this chapter, on or adjacent to the container which is secured in such a manner that they are not likely to be separated during crash impact.
- (e) Any novel or unique design or operational characteristics of the aircraft shall be evaluated to determine if any dedicated parameters must be recorded on flight recorders in addition to or in place of existing requirements. CITA≤[Amdt. 23–35, 53 FR 26143, July 11, 1988]

§ 23.1461 Equipment containing high energy rotors.

(a) Equipment, such as Auxiliary Power Units (APU) and constant speed drive units, containing high energy ro-

- tors must meet paragraphs (b), (c), or (d) of this section.
- (b) High energy rotors contained in equipment must be able to withstand damage caused by malfunctions, vibration, abnormal speeds, and abnormal temperatures. In addition—
- (1) Auxiliary rotor cases must be able to contain damage caused by the failure of high energy rotor blades; and
- (2) Equipment control devices, systems, and instrumentation must reasonably ensure that no operating limitations affecting the integrity of high energy rotors will be exceeded in service.
- (c) It must be shown by test that equipment containing high energy rotors can contain any failure of a high energy rotor that occurs at the highest speed obtainable with the normal speed control devices inoperative.
- (d) Equipment containing high energy rotors must be located where rotor failure will neither endanger the occupants nor adversely affect continued safe flight.

[Amdt. 23–20, 42 FR 36969, July 18, 1977, as amended by Amdt. 23–49, 61 FR 5170, Feb. 9, 1996]

Subpart G—Operating Limitations and Information

§ 23.1501 General.

- (a) Each operating limitation specified in §§23.1505 through 23.1527 and other limitations and information necessary for safe operation must be established.
- (b) The operating limitations and other information necessary for safe operation must be made available to the crewmembers as prescribed in §§ 23.1541 through 23.1589.

[Amdt. 23-21, 43 FR 2319, Jan. 16, 1978]

§23.1505 Airspeed limitations.

- (a) The never-exceed speed V_{NE} must be established so that it is—
- (1) Not less than 0.9 times the minimum value of V_D allowed under §23.335; and
 - (2) Not more than the lesser of—
 - (i) 0.9 V_D established under §23.335; or
- (ii) 0.9 times the maximum speed shown under §23.251.

Federal Aviation Administration, DOT

- (b) The maximum structural cruising speed V_{NO} must be established so that it is—
- (1) Not less than the minimum value of V_C allowed under §23.335; and
 - (2) Not more than the lesser of-
 - (i) V_C established under §23.335; or
- (ii) $0.89\ V_{NE}$ established under paragraph (a) of this section.
- (c) Paragraphs (a) and (b) of this section do not apply to turbine airplanes or to airplanes for which a design diving speed V_D/M_D is established under §23.335(b)(4). For those airplanes, a maximum operating limit speed $(V_{MO}/$ M_{MO} -airspeed or Mach number, whichever is critical at a particular altitude) must be established as a speed that may not be deliberately exceeded in any regime of flight (climb, cruise, or descent) unless a higher speed is authorized for flight test or pilot training operations. V_{MO}/M_{MO} must be established so that it is not greater than the design cruising speed V_C/M_C and so that it is sufficiently below V_D/M_D and the maximum speed shown under §23.251 to make it highly improbable that the latter speeds will be inadvertently exceeded in operations. The speed margin between V_{MO}/M_{MO} and V_D/M_D or the maximum speed shown under §23.251 may not be less than the speed margin established between V_C/M_C and V_D/M_D under §23.335(b), or the speed margin found necessary in the flight test conducted under §23.253.

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964, as amended by Amdt. 23–7, 34 FR 13096, Aug. 13, 1969]

§ 23.1507 Operating maneuvering speed.

The maximum operating maneuvering speed, V_O , must be established as an operating limitation. V_O is a selected speed that is not greater than $V_S\sqrt{n}$ established in §23.335(c).

[Doc. No. 26269, 58 FR 42165, Aug. 6, 1993]

§23.1511 Flap extended speed.

- (a) The flap extended speed V_{FE} must be established so that it is—
- (1) Not less than the minimum value of V_F allowed in §23.345(b); and
- (2) Not more than V_F established under §23.345(a), (c), and (d).
- (i) V_F established under §23.345; or
- (ii) V_F established under §23.457.

(b) Additional combinations of flap setting, airspeed, and engine power may be established if the structure has been proven for the corresponding design conditions.

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964; 30 FR 258, Jan. 9, 1965, as amended by Amdt. 23–50, 61 FR 5192, Feb. 9, 1996]

§23.1513 Minimum control speed.

The minimum control speed V_{MC} , determined under §23.149, must be established as an operating limitation.

§23.1519 Weight and center of gravity.

The weight and center of gravity limitations determined under §23.23 must be established as operating limitations.

§23.1521 Powerplant limitations.

- (a) General. The powerplant limitations prescribed in this section must be established so that they do not exceed the corresponding limits for which the engines or propellers are type certificated. In addition, other powerplant limitations used in determining compliance with this part must be established.
- (b) Takeoff operation. The powerplant takeoff operation must be limited by—
- (1) The maximum rotational speed (rpm):
- (2) The maximum allowable manifold pressure (for reciprocating engines);
- (3) The maximum allowable gas temperature (for turbine engines);
- (4) The time limit for the use of the power or thrust corresponding to the limitations established in paragraphs (b)(1) through (3) of this section; and
- (5) The maximum allowable cylinder head (as applicable), liquid coolant and oil temperatures.
- (c) Continuous operation. The continuous operation must be limited by—
- (1) The maximum rotational speed;
- (2) The maximum allowable manifold pressure (for reciprocating engines);
- (3) The maximum allowable gas temperature (for turbine engines); and
- (4) The maximum allowable cylinder head, oil, and liquid coolant temperatures.
- (d) Fuel grade or designation. The minimum fuel grade (for reciprocating engines), or fuel designation (for turbine engines), must be established so that it is not less than that required for the

operation of the engines within the limitations in paragraphs (b) and (c) of this section.

(e) Ambient temperature. For all airplanes except reciprocating engine-powered airplanes of 6,000 pounds or less maximum weight, ambient temperature limitations (including limitations for winterization installations if applicable) must be established as the maximum ambient atmospheric temperature at which compliance with the cooling provisions of §§ 23.1041 through 23.1047 is shown.

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964; 30 FR 258, Jan. 9, 1965, as amended by Amdt. 23–21, 43 FR 2319, Jan. 16, 1978; Amdt. 23–45, 58 FR 42165, Aug. 6, 1993; Amdt. 23–50, 61 FR 5192, Feb. 9, 1996]

§ 23.1522 Auxiliary power unit limitations.

If an auxiliary power unit is installed, the limitations established for the auxiliary power must be specified in the operating limitations for the airplane. [Doc. No. 26269, 58 FR 42166, Aug. 6. 1993]

§23.1523 Minimum flight crew.

The minimum flight crew must be established so that it is sufficient for safe operation considering—

- (a) The workload on individual crewmembers and, in addition for commuter category airplanes, each crewmember workload determination must consider the following:
 - (1) Flight path control,
 - (2) Collision avoidance,
 - (3) Navigation,
 - (4) Communications,
- (5) Operation and monitoring of all essential airplane systems,
 - (6) Command decisions, and
- (7) The accessibility and ease of operation of necessary controls by the appropriate crewmember during all normal and emergency operations when at the crewmember flight station;
- (b) The accessibility and ease of operation of necessary controls by the appropriate crewmember; and
- (c) The kinds of operation authorized under §23.1525.

[Amdt. 23–21, 43 FR 2319, Jan. 16, 1978, as amended by Amdt. 23–34, 52 FR 1834, Jan. 15, 1987]

§ 23.1524 Maximum passenger seating configuration.

The maximum passenger seating configuration must be established.

[Amdt. 23-10, 36 FR 2864, Feb. 11, 1971]

§23.1525 Kinds of operation.

The kinds of operation authorized (e.g. VFR, IFR, day or night) and the meteorological conditions (e.g. icing) to which the operation of the airplane is limited or from which it is prohibited, must be established appropriate to the installed equipment.

[Doc. No. 26269, 58 FR 42166, Aug. 6, 1993]

§ 23.1527 Maximum operating altitude.

- (a) The maximum altitude up to which operation is allowed, as limited by flight, structural, powerplant, functional or equipment characteristics, must be established.
- (b) A maximum operating altitude limitation of not more than 25,000 feet must be established for pressurized airplanes unless compliance with §23.775(e) is shown.

[Doc. No. 26269, 58 FR 42166, Aug. 6, 1993]

§ 23.1529 Instructions for Continued Airworthiness.

The applicant must prepare Instructions for Continued Airworthiness in accordance with appendix G to this part that are acceptable to the Administrator. The instructions may be incomplete at type certification if a program exists to ensure their completion prior to delivery of the first airplane or issuance of a standard certificate of airworthiness, whichever occurs later.

[Amdt. 23–26, 45 FR 60171, Sept. 11, 1980]

MARKINGS AND PLACARDS

§ 23.1541 General.

- (a) The airplane must contain—
- (1) The markings and placards specified in §§ 23.1545 through 23.1567; and
- (2) Any additional information, instrument markings, and placards required for the safe operation if it has unusual design, operating, or handling characteristics.
- (b) Each marking and placard prescribed in paragraph (a) of this section—

- (1) Must be displayed in a conspicuous place; and
- (2) May not be easily erased, disfigured, or obscured.
- (c) For airplanes which are to be certificated in more than one category—
- (1) The applicant must select one category upon which the placards and markings are to be based; and
- (2) The placards and marking information for all categories in which the airplane is to be certificated must be furnished in the Airplane Flight Mannal

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964; 30 FR 258, Jan. 9, 1965, as amended by Amdt. 23–21, 43 FR 2319, Jan. 16, 1978]

§ 23.1543 Instrument markings: General.

For each instrument—

- (a) When markings are on the cover glass of the instrument, there must be means to maintain the correct alignment of the glass cover with the face of the dial: and
- (b) Each arc and line must be wide enough and located to be clearly visible to the pilot.
- (c) All related instruments must be calibrated in compatible units.

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964; 30 FR 258, Jan. 9, 1965, as amended by Amdt. 23–50, 61 FR 5192, Feb. 9, 1996]

§23.1545 Airspeed indicator.

- (a) Each airspeed indicator must be marked as specified in paragraph (b) of this section, with the marks located at the corresponding indicated airspeeds.
- (b) The following markings must be made:
- (1) For the never-exceed speed V_{NE} , a radial red line.
- (2) For the caution range, a yellow arc extending from the red line specified in paragraph (b)(1) of this section to the upper limit of the green arc specified in paragraph (b)(3) of this section.
- (3) For the normal operating range, a green arc with the lower limit at V_{SI} with maximum weight and with landing gear and wing flaps retracted, and the upper limit at the maximum structural cruising speed V_{NO} established under 23.1505.
- (4) For the flap operating range, a white arc with the lower limit at V_{S0} at

the maximum weight, and the upper limit at the flaps-extended speed V_{FE} established under §23.1511.

- (5) For reciprocating multiengine-powered airplanes of 6,000 pounds or less maximum weight, for the speed at which compliance has been shown with \$23.69(b) relating to rate of climb at maximum weight and at sea level, a blue radial line.
- (6) For reciprocating multiengine-powered airplanes of 6,000 pounds or less maximum weight, for the maximum value of minimum control speed, $V_{\rm MC},$ (one-engine-inoperative) determined under $\S23.149(b),$ a red radial line.
- (c) If V_{NE} or V_{NO} vary with altitude, there must be means to indicate to the pilot the appropriate limitations throughout the operating altitude range.
- (d) Paragraphs (b)(1) through (b)(3) and paragraph (c) of this section do not apply to aircraft for which a maximum operating speed V_{MO}/M_{MO} is established under §23.1505(c). For those aircraft there must either be a maximum allowable airspeed indication showing the variation of V_{MO}/M_{MO} with altitude or compressibility limitations (as appropriate), or a radial red line marking for V_{MO}/M_{MO} must be made at lowest value of V_{MO}/M_{MO} established for any altitude up to the maximum operating altitude for the airplane.

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964, as amended by Amdt. 23–3, 30 FR 14240, Nov. 13, 1965; Amdt. 23–7, 34 FR 13097, Aug. 13, 1969; Amdt. 23–23, 43 FR 50593, Oct. 30, 1978; Amdt. 23–50, 61 FR 5193, Feb. 9, 1996]

§23.1547 Magnetic direction indicator.

- (a) A placard meeting the requirements of this section must be installed on or near the magnetic direction indicator.
- (b) The placard must show the calibration of the instrument in level flight with the engines operating.
- (c) The placard must state whether the calibration was made with radio receivers on or off.
- (d) Each calibration reading must be in terms of magnetic headings in not more than 30 degree increments.
- (e) If a magnetic nonstabilized direction indicator can have a deviation of

more than 10 degrees caused by the operation of electrical equipment, the placard must state which electrical loads, or combination of loads, would cause a deviation of more than 10 degrees when turned on.

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964; 30 FR 258, Jan. 9, 1965, as amended by Amdt. 23–20, 42 FR 36969, July 18, 1977]

§23.1549 Powerplant and auxiliary power unit instruments.

For each required powerplant and auxiliary power unit instrument, as appropriate to the type of instruments—

- (a) Each maximum and, if applicable, minimum safe operating limit must be marked with a red radial or a red line;
- (b) Each normal operating range must be marked with a green arc or green line, not extending beyond the maximum and minimum safe limits;
- (c) Each takeoff and precautionary range must be marked with a yellow arc or a yellow line; and
- (d) Each engine, auxiliary power unit, or propeller range that is restricted because of excessive vibration stresses must be marked with red arcs or red lines.

[Amdt. 23–12, 41 FR 55466, Dec. 20, 1976, as amended by Amdt. 23–28, 47 FR 13315, Mar. 29, 1982; Amdt. 23–45, 58 FR 42166, Aug. 6, 1993]

§23.1551 Oil quantity indicator.

Each oil quantity indicator must be marked in sufficient increments to indicate readily and accurately the quantity of oil.

§23.1553 Fuel quantity indicator.

A red radial line must be marked on each indicator at the calibrated zero reading, as specified in §23.1337(b)(1).

[Doc. No. 27807, 61 FR 5193, Feb. 9, 1996]

§23.1555 Control markings.

- (a) Each cockpit control, other than primary flight controls and simple push button type starter switches, must be plainly marked as to its function and method of operation.
- (b) Each secondary control must be suitably marked.
- (c) For powerplant fuel controls—
- (1) Each fuel tank selector control must be marked to indicate the posi-

tion corresponding to each tank and to each existing cross feed position;

- (2) If safe operation requires the use of any tanks in a specific sequence, that sequence must be marked on or near the selector for those tanks;
- (3) The conditions under which the full amount of usable fuel in any restricted usage fuel tank can safely be used must be stated on a placard adjacent to the selector valve for that tank: and
- (4) Each valve control for any engine of a multiengine airplane must be marked to indicate the position corresponding to each engine controlled.
- (d) Usable fuel capacity must be marked as follows:
- (1) For fuel systems having no selector controls, the usable fuel capacity of the system must be indicated at the fuel quantity indicator.
- (2) For fuel systems having selector controls, the usable fuel capacity available at each selector control position must be indicated near the selector control.
- (e) For accessory, auxiliary, and emergency controls—
- (1) If retractable landing gear is used, the indicator required by §23.729 must be marked so that the pilot can, at any time, ascertain that the wheels are secured in the extreme positions; and
- (2) Each emergency control must be red and must be marked as to method of operation. No control other than an emergency control, or a control that serves an emergency function in addition to its other functions, shall be this color.

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964; 30 FR 258, Jan. 9, 1965, as amended by Amdt. 23–21, 43 FR 2319, Jan. 16, 1978; Amdt. 23–50, 61 FR 5193, Feb. 9, 1996]

§ 23.1557 Miscellaneous markings and placards.

- (a) Baggage and cargo compartments, and ballast location. Each baggage and cargo compartment, and each ballast location, must have a placard stating any limitations on contents, including weight, that are necessary under the loading requirements.
- (b) Seats. If the maximum allowable weight to be carried in a seat is less than 170 pounds, a placard stating the

lesser weight must be permanently attached to the seat structure.

- (c) Fuel, oil, and coolant filler openings. The following apply:
- (1) Fuel filter openings must be marked at or near the filler cover with— $\,$
- (i) For reciprocating engine-powered airplanes—
 - (A) The word "Avgas"; and
 - (B) The minimum fuel grade.
- (ii) For turbine engine-powered airplanes—
 - (A) The words "Jet Fuel"; and
- (B) The permissible fuel designations, or references to the Airplane Flight Manual (AFM) for permissible fuel designations
- (iii) For pressure fueling systems, the maximum permissible fueling supply pressure and the maximum permissible defueling pressure.
- (2) Oil filler openings must be marked at or near the filler cover with the word "Oil" and the permissible oil designations, or references to the Airplane Flight Manual (AFM) for permissible oil designations.
- (3) Coolant filler openings must be marked at or near the filler cover with the word "Coolant".
- (d) Emergency exit placards. Each placard and operating control for each emergency exit must be red. A placard must be near each emergency exit control and must clearly indicate the location of that exit and its method of operation.
- (e) The system voltage of each direct current installation must be clearly marked adjacent to its exernal power connection.

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964; as amended by Amdt. 23–21, 42 FR 15042, Mar. 17, 1977; Amdt. 23–23, 43 FR 50594, Oct. 30, 1978; Amdt. 23–45, 58 FR 42166, Aug. 6, 1993]

§ 23.1559 Operating limitations placard.

- (a) There must be a placard in clear view of the pilot stating—
- (1) That the airplane must be operated in accordance with the Airplane Flight Manual; and
- (2) The certification category of the airplane to which the placards apply.
- (b) For airplanes certificated in more than one category, there must be a placard in clear view of the pilot stat-

ing that other limitations are contained in the Airplane Flight Manual.

(c) There must be a placard in clear view of the pilot that specifies the kind of operations to which the operation of the airplane is limited or from which it is prohibited under §23.1525.

[Doc. No. 27807, 61 FR 5193, Feb. 9, 1996]

§23.1561 Safety equipment.

- (a) Safety equipment must be plainly marked as to method of operation.
- (b) Stowage provisions for required safety equipment must be marked for the benefit of occupants.

§23.1563 Airspeed placards.

There must be an airspeed placard in clear view of the pilot and as close as practicable to the airspeed indicator. This placard must list—

- (a) The operating maneuvering speed, V_0 ; and
- (b) The maximum landing gear operating speed V_{LO} .
- (c) For reciprocating multiengine-powered airplanes of more than 6,000 pounds maximum weight, and turbine engine-powered airplanes, the maximum value of the minimum control speed, $V_{\rm MC}$ (one-engine-inoperative) determined under §23.149(b).

[Amdt. 23–7, 34 FR 13097, Aug. 13, 1969, as amended by Amdt. 23–45, 58 FR 42166, Aug. 6, 1993; Amdt. 23–50, 61 FR 5193, Feb. 9, 1996]

§23.1567 Flight maneuver placard.

- (a) For normal category airplanes, there must be a placard in front of and in clear view of the pilot stating: "No acrobatic maneuvers, including spins, approved."
- (b) For utility category airplanes, there must be—
- (1) A placard in clear view of the pilot stating: "Acrobatic maneuvers are limited to the following ——" (list approved maneuvers and the recommended entry speed for each); and
- (2) For those airplanes that do not meet the spin requirements for acrobatic category airplanes, an additional placard in clear view of the pilot stating: "Spins Prohibited."
- (c) For acrobatic category airplanes, there must be a placard in clear view of the pilot listing the approved acrobatic maneuvers and the recommended entry

airspeed for each. If inverted flight maneuvers are not approved, the placard must bear a notation to this effect.

- (d) For acrobatic category airplanes and utility category airplanes approved for spinning, there must be a placard in clear view of the pilot—
- (1) Listing the control actions for recovery from spinning maneuvers; and
- (2) Stating that recovery must be initiated when spiral characteristics appear, or after not more than six turns or not more than any greater number of turns for which the airplane has been certificated.

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964; 30 FR 258, Jan. 9, 1965, as amended by Amdt. 23–13, 37 FR 20023, Sept. 23, 1972; Amdt. 23–21, 43 FR 2319, Jan. 16, 1978; Amdt. 23–50, 61 FR 5193, Feb. 9, 19961

AIRPLANE FLIGHT MANUAL AND APPROVED MANUAL MATERIAL

§23.1581 General.

- (a) Furnishing information. An Airplane Flight Manual must be furnished with each airplane, and it must contain the following:
- (1) Information required by \S 23.1583 through 23.1589.
- (2) Other information that is necessary for safe operation because of design, operating, or handling characteristics.
- (3) Further information necessary to comply with the relevant operating rules.
- (b) Approved information. (1) Except as provided in paragraph (b)(2) of this section, each part of the Airplane Flight Manual containing information prescribed in §§ 23.1583 through 23.1589 must be approved, segregated, identified and clearly distinguished from each unapproved part of that Airplane Flight Manual.
- (2) The requirements of paragraph (b)(1) of this section do not apply to reciprocating engine-powered airplanes of 6,000 pounds or less maximum weight, if the following is met:
- (i) Each part of the Airplane Flight Manual containing information prescribed in §23.1583 must be limited to such information, and must be approved, identified, and clearly distinguished from each other part of the Airplane Flight Manual.

- (ii) The information prescribed in §§ 23.1585 through 23.1589 must be determined in accordance with the applicable requirements of this part and presented in its entirety in a manner acceptable to the Administrator.
- (3) Each page of the Airplane Flight Manual containing information prescribed in this section must be of a type that is not easily erased, disfigured, or misplaced, and is capable of being inserted in a manual provided by the applicant, or in a folder, or in any other permanent binder.
- (c) The units used in the Airplane Flight Manual must be the same as those marked on the appropriate instruments and placards.
- (d) All Airplane Flight Manual operational airspeeds, unless otherwise specified, must be presented as indicated airspeeds.
- (e) Provision must be made for stowing the Airplane Flight Manual in a suitable fixed container which is readily accessible to the pilot.
- (f) Revisions and amendments. Each Airplane Flight Manual (AFM) must contain a means for recording the incorporation of revisions and amendments.

[Amdt. 23–21, 43 FR 2319, Jan. 16, 1978, as amended by Amdt. 23–34, 52 FR 1834, Jan. 15, 1987; Amdt. 23–45, 58 FR 42166, Aug. 6, 1993; Amdt. 23–50, 61 FR 5193, Feb. 9, 1996]

§23.1583 Operating limitations.

The Airplane Flight Manual must contain operating limitations determined under this part 23, including the following—

- (a) Airspeed limitations. The following information must be furnished:
- (1) Information necessary for the marking of the airspeed limits on the indicator as required in §23.1545, and the significance of each of those limits and of the color coding used on the indicator.
- (2) The speeds V_{MC} , V_{O} , V_{LE} , and V_{LO} , if established, and their significance.
- (3) In addition, for turbine powered commuter category airplanes—
- (i) The maximum operating limit speed, V_{MO}/M_{MO} and a statement that this speed must not be deliberately exceeded in any regime of flight (climb, cruise or descent) unless a higher speed

is authorized for flight test or pilot training;

- (ii) If an airspeed limitation is based upon compressibility effects, a statement to this effect and information as to any symptoms, the probable behavior of the airplane, and the recommended recovery procedures; and
- (iii) The airspeed limits must be shown in terms of V_{MO}/M_{MO} instead of V_{NO} and V_{NF} .
- (b) *Powerplant limitations*. The following information must be furnished:
 - (1) Limitations required by §23.1521.
- (2) Explanation of the limitations, when appropriate.
- (3) Information necessary for marking the instruments required by §23.1549 through §23.1553.
- (c) Weight. The airplane flight manual must include—
 - (1) The maximum weight; and
- (2) The maximum landing weight, if the design landing weight selected by the applicant is less than the maximum weight.
- (3) For normal, utility, and acrobatic category reciprocating engine-powered airplanes of more than 6,000 pounds maximum weight and for turbine engine-powered airplanes in the normal, utility, and acrobatic category, performance operating limitations as follows—
- (i) The maximum takeoff weight for each airport altitude and ambient temperature within the range selected by the applicant at which the airplane complies with the climb requirements of $\S23.63(c)(1)$.
- (ii) The maximum landing weight for each airport altitude and ambient temperature within the range selected by the applicant at which the airplane complies with the climb requirements of §23.63(c)(2).
- (4) For commuter category airplanes, the maximum takeoff weight for each airport altitude and ambient temperature within the range selected by the applicant at which—
- (i) The airplane complies with the climb requirements of §23.63(d)(1); and
- (ii) The accelerate-stop distance determined under §23.55 is equal to the available runway length plus the length of any stopway, if utilized; and either:

- (iii) The takeoff distance determined under §23.59(a) is equal to the available runway length; or
- (iv) At the option of the applicant, the takeoff distance determined under §23.59(a) is equal to the available runway length plus the length of any clearway and the takeoff run determined under §23.59(b) is equal to the available runway length.
- (5) For commuter category airplanes, the maximum landing weight for each airport altitude within the range selected by the applicant at which—
- (i) The airplane complies with the climb requirements of \$23.63(d)(2) for ambient temperatures within the range selected by the applicant; and
- (ii) The landing distance determined under §23.75 for standard temperatures is equal to the available runway length.
- (6) The maximum zero wing fuel weight, where relevant, as established in accordance with §23.343.
- (d) Center of gravity. The established center of gravity limits.
- (e) *Maneuvers*. The following authorized maneuvers, appropriate airspeed limitations, and unauthorized maneuvers, as prescribed in this section.
- (1) Normal category airplanes. No acrobatic maneuvers, including spins, are authorized.
- (2) Utility category airplanes. A list of authorized maneuvers demonstrated in the type flight tests, together with recommended entry speeds and any other associated limitations. No other maneuver is authorized.
- (3) Acrobatic category airplanes. A list of approved flight maneuvers demonstrated in the type flight tests, together with recommended entry speeds and any other associated limitations.
- (4) Acrobatic category airplanes and utility category airplanes approved for spinning. Spin recovery procedure established to show compliance with §23.221(c).
- (5) Commuter category airplanes. Maneuvers are limited to any maneuver incident to normal flying, stalls, (except whip stalls) and steep turns in which the angle of bank is not more than 60 degrees.

- (f) Maneuver load factor. The positive limit load factors in g's, and, in addition, the negative limit load factor for acrobatic category airplanes.
- (g) Minimum flight crew. The number and functions of the minimum flight crew determined under §23.1523.
- (h) Kinds of operation. A list of the kinds of operation to which the airplane is limited or from which it is prohibited under §23.1525, and also a list of installed equipment that affects any operating limitation and identification as to the equipment's required operational status for the kinds of operation for which approval has been given.
- (i) Maximum operating altitude. The maximum altitude established under § 23.1527.
- (j) Maximum passenger seating configuration. The maximum passenger seating configuration.
- (k) Allowable lateral fuel loading. The maximum allowable lateral fuel loading differential, if less than the maximum possible.
- (1) Baggage and cargo loading. The following information for each baggage and cargo compartment or zone—
- and cargo compartment or zone—

 (1) The maximum allowable load; and
 (2) The maximum intensity of load-
- ing.
 (m) Systems. Any limitations on the use of airplane systems and equipment.
- (n) Ambient temperatures. Where appropriate, maximum and minimum ambient air temperatures for operation.
- (o) *Smoking*. Any restrictions on smoking in the airplane.
- (p) Types of surface. A statement of the types of surface on which operations may be conducted. (See $\S23.45(g)$ and $\S23.1587$ (a)(4), (c)(2), and (d)(4)).

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964, as amended by Amdt. 23–7, 34 FR 13097, Aug. 13, 1969; Amdt. 23–10, 36 FR 2864, Feb. 11, 1971; Amdt. 23–21, 43 FR 2320, Jan. 16, 1978; Amdt. 23–23, 43 FR 50594, Oct. 30, 1978; Amdt. 23–34, 52 FR 1834, Jan. 15, 1987; Amdt. 23–45, 58 FR 42166, Aug. 6, 1993; Amdt. 23–50, 61 FR 5193, Feb. 9, 1996]

§ 23.1585 Operating procedures.

(a) For all airplanes, information concerning normal, abnormal (if applicable), and emergency procedures and other pertinent information necessary for safe operation and the achievement

- of the scheduled performance must be furnished, including—
- (1) An explanation of significant or unusual flight or ground handling characteristics:
- (2) The maximum demonstrated values of crosswind for takeoff and landing, and procedures and information pertinent to operations in crosswinds;
- (3) A recommended speed for flight in rough air. This speed must be chosen to protect against the occurrence, as a result of gusts, of structural damage to the airplane and loss of control (for example, stalling);
- (4) Procedures for restarting any turbine engine in flight, including the effects of altitude; and
- (5) Procedures, speeds, and configuration(s) for making a normal approach and landing, in accordance with §§ 23.73 and 23.75, and a transition to the balked landing condition.
- (6) For seaplanes and amphibians, water handling procedures and the demonstrated wave height.
- (b) In addition to paragraph (a) of this section, for all single-engine airplanes, the procedures, speeds, and configuration(s) for a glide following engine failure, in accordance with §23.71 and the subsequent forced landing, must be furnished.
- (c) In addition to paragraph (a) of this section, for all multiengine airplanes, the following information must be furnished:
- (1) Procedures, speeds, and configuration(s) for making an approach and landing with one engine inoperative;
- (2) Procedures, speeds, and configuration(s) for making a balked landing with one engine inoperative and the conditions under which a balked landing can be performed safely, or a warning against attempting a balked landing;
- (3) The V_{SSE} determined in §23.149; and
- (4) Procedures for restarting any engine in flight including the effects of altitude.
- (d) In addition to paragraphs (a) and either (b) or (c) of this section, as appropriate, for all normal, utility, and acrobatic category airplanes, the following information must be furnished:
- (1) Procedures, speeds, and configuration(s) for making a normal takeoff, in

accordance with $\S23.51$ (a) and (b), and $\S23.53$ (a) and (b), and the subsequent climb, in accordance with $\S23.65$ and $\S23.69$ (a).

- (2) Procedures for abandoning a takeoff due to engine failure or other cause.
- (e) In addition to paragraphs (a), (c), and (d) of this section, for all normal, utility, and acrobatic category multiengine airplanes, the information must include the following:
- (1) Procedures and speeds for continuing a takeoff following engine failure and the conditions under which takeoff can safely be continued, or a warning against attempting to continue the takeoff.
- (2) Procedures, speeds, and configurations for continuing a climb following engine failure, after takeoff, in accordance with §23.67, or enroute, in accordance with §23.69(b).
- (f) In addition to paragraphs (a) and (c) of this section, for commuter category airplanes, the information must include the following:
- (1) Procedures, speeds, and configuration(s) for making a normal takeoff.
- (2) Procedures and speeds for carrying out an accelerate-stop in accordance with §23.55.
- (3) Procedures and speeds for continuing a takeoff following engine failure in accordance with §23.59(a)(1) and for following the flight path determined under §23.57 and §23.61(a).
- (g) For multiengine airplanes, information identifying each operating condition in which the fuel system independence prescribed in §23.953 is necessary for safety must be furnished, together with instructions for placing the fuel system in a configuration used to show compliance with that section.
- (h) For each airplane showing compliance with $\S 23.1353$ (g)(2) or (g)(3), the operating procedures for disconnecting the battery from its charging source must be furnished.
- (i) Information on the total quantity of usable fuel for each fuel tank, and the effect on the usable fuel quantity, as a result of a failure of any pump, must be furnished.
- (j) Procedures for the safe operation of the airplane's systems and equipment, both in normal use and in the

event of malfunction, must be furnished.

[Doc. No. 27807, 61 FR 5194, Feb. 9, 1996]

§23.1587 Performance information.

Unless otherwise prescribed, performance information must be provided over the altitude and temperature ranges required by §23.45(b).

- (a) For all airplanes, the following information must be furnished—
- (1) The stalling speeds V_{SO} and V_{S1} with the landing gear and wing flaps retracted, determined at maximum weight under $\S23.49$, and the effect on these stalling speeds of angles of bank up to 60 degrees;
- (2) The steady rate and gradient of climb with all engines operating, determined under \$23.69(a):
- (3) The landing distance, determined under §23.75 for each airport altitude and standard temperature, and the type of surface for which it is valid;
- (4) The effect on landing distances of operation on other than smooth hard surfaces, when dry, determined under \$23.45(g); and
- (5) The effect on landing distances of runway slope and 50 percent of the headwind component and 150 percent of the tailwind component.
- (b) In addition to paragraph (a) of this section, for all normal, utility, and acrobatic category reciprocating engine-powered airplanes of 6,000 pounds or less maximum weight, the steady angle of climb/descent, determined under §23.77(a), must be furnished.
- (c) In addition to paragraphs (a) and (b) of this section, if appropriate, for normal, utility, and acrobatic category airplanes, the following information must be furnished—
- (1) The takeoff distance, determined under §23.53 and the type of surface for which it is valid.
- (2) The effect on takeoff distance of operation on other than smooth hard surfaces, when dry, determined under §23.45(g);
- (3) The effect on takeoff distance of runway slope and 50 percent of the headwind component and 150 percent of the tailwind component:
- (4) For multiengine reciprocating engine-powered airplanes of more than 6,000 pounds maximum weight and multiengine turbine powered airplanes, the

one-engine-inoperative takeoff climb/ descent gradient, determined under §23.66:

- (5) For multiengine airplanes, the enroute rate and gradient of climb/descent with one engine inoperative, determined under §23.69(b); and
- (6) For single-engine airplanes, the glide performance determined under §23.71.
- (d) In addition to paragraph (a) of this section, for commuter category airplanes, the following information must be furnished—
- (1) The accelerate-stop distance determined under §23.55;
- (2) The takeoff distance determined under §23.59(a);
- (3) At the option of the applicant, the takeoff run determined under §23.59(b);
- (4) The effect on accelerate-stop distance, takeoff distance and, if determined, takeoff run, of operation on other than smooth hard surfaces, when dry, determined under §23.45(g);
- (5) The effect on accelerate-stop distance, takeoff distance, and if determined, takeoff run, of runway slope and 50 percent of the headwind component and 150 percent of the tailwind component;
- (6) The net takeoff flight path determined under §23.61(b);
- (7) The enroute gradient of climb/descent with one engine inoperative, determined under §23.69(b);
- (8) The effect, on the net takeoff flight path and on the enroute gradient of climb/descent with one engine inoperative, of 50 percent of the headwind component and 150 percent of the tailwind component;
- (9) Overweight landing performance information (determined by extrapolation and computed for the range of weights between the maximum landing and maximum takeoff weights) as follows—
- (i) The maximum weight for each airport altitude and ambient temperature at which the airplane complies with the climb requirements of §23.63(d)(2); and
- (ii) The landing distance determined under $\S 23.75$ for each airport altitude and standard temperature.
- (10) The relationship between IAS and CAS determined in accordance with §23.1323 (b) and (c).

(11) The altimeter system calibration required by §23.1325(e).

[Doc. No. 27807, 61 FR 5194, Feb. 9, 1996]

§23.1589 Loading information.

The following loading information must be furnished:

- (a) The weight and location of each item of equipment that can be easily removed, relocated, or replaced and that is installed when the airplane was weighed under the requirement of \$23.25.
- (b) Appropriate loading instructions for each possible loading condition between the maximum and minimum weights established under §23.25, to facilitate the center of gravity remaining within the limits established under §23.23.

[Doc. No. 4080, 29 FR 17955, Dec. 18, 1964, as amended by Amdt. 23–45, 58 FR 42167, Aug. 6, 1993; Amdt. 23–50, 61 FR 5195, Feb. 9, 1996]

APPENDIX A TO PART 23—SIMPLIFIED DESIGN LOAD CRITERIA

$A23.1 \quad General.$

- (a) The design load criteria in this appendix are an approved equivalent of those in §§ 23.321 through 23.459 of this subchapter for an airplane having a maximum weight of 6,000 pounds or less and the following configuration:
- (1) A single engine excluding turbine powerplants;
- (2) A main wing located closer to the airplane's center of gravity than to the aft, fuselage-mounted, empennage;
- (3) A main wing that contains a quarterchord sweep angle of not more than 15 degrees fore or aft;
- (4) A main wing that is equipped with trailing-edge controls (ailerons or flaps, or both);
- (5) A main wing aspect ratio not greater than 7;
- (6) A horizontal tail aspect ratio not greater than 4;
- (7) A horizontal tail volume coefficient not less than 0.34;
- (8) A vertical tail aspect ratio not greater than 2;
- (9) Å vertical tail platform area not greater than 10 percent of the wing platform area; and
- (10) Symmetrical airfoils must be used in both the horizontal and vertical tail designs.
- (b) Appendix A criteria may not be used on any airplane configuration that contains any of the following design features:
- (1) Canard, tandem-wing, close-coupled, or tailless arrangements of the lifting surfaces;
